

Sound

Dr. Josef Fruehwald

What is sound?

Key takeaway:

- Sound takes up space

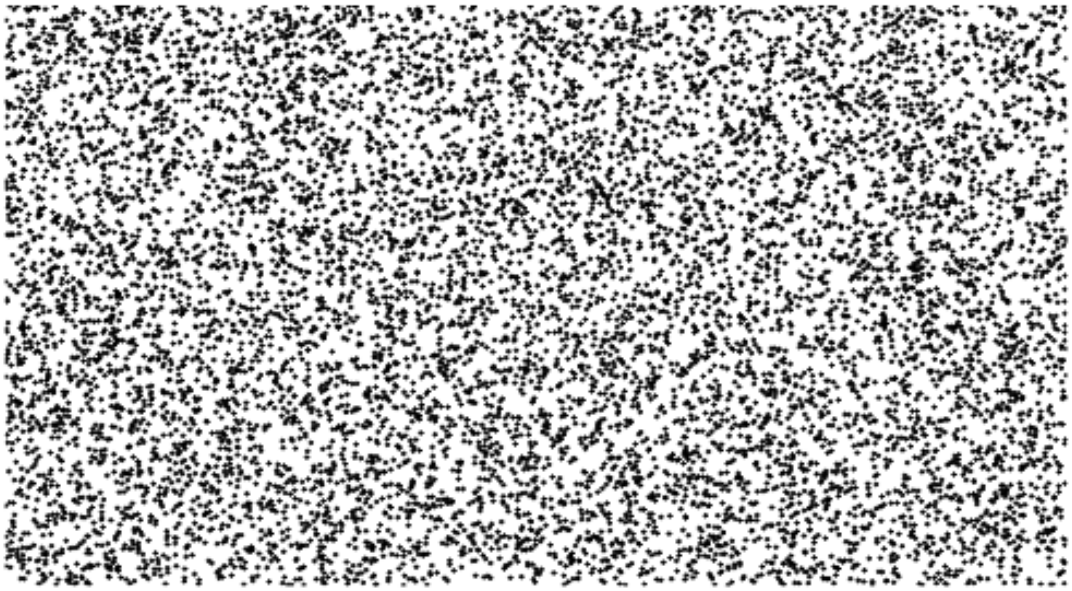

```
Loading required package: sysfonts
```

```
Loading required package: showtextdb
```

```
── Attaching core tidyverse packages ──────────────────────── tidyverse 2.0.0 ──
✓ dplyr     1.2.1     ✓ readr     2.2.0
✓ forcats   1.0.1     ✓ stringr   1.6.0
✓ lubridate 1.9.5     ✓ tibble    3.3.1
✓ purrr     1.2.2     ✓ tidyr     1.3.2
── Conflicts ────────────────────────────────────────── tidyverse_conflicts() ──
✖ dplyr::filter() masks stats::filter()
✖ dplyr::lag()    masks stats::lag()
ℹ Use the conflicted package (<http://conflicted.r-lib.org/>) to force all
conflicts to become errors
```

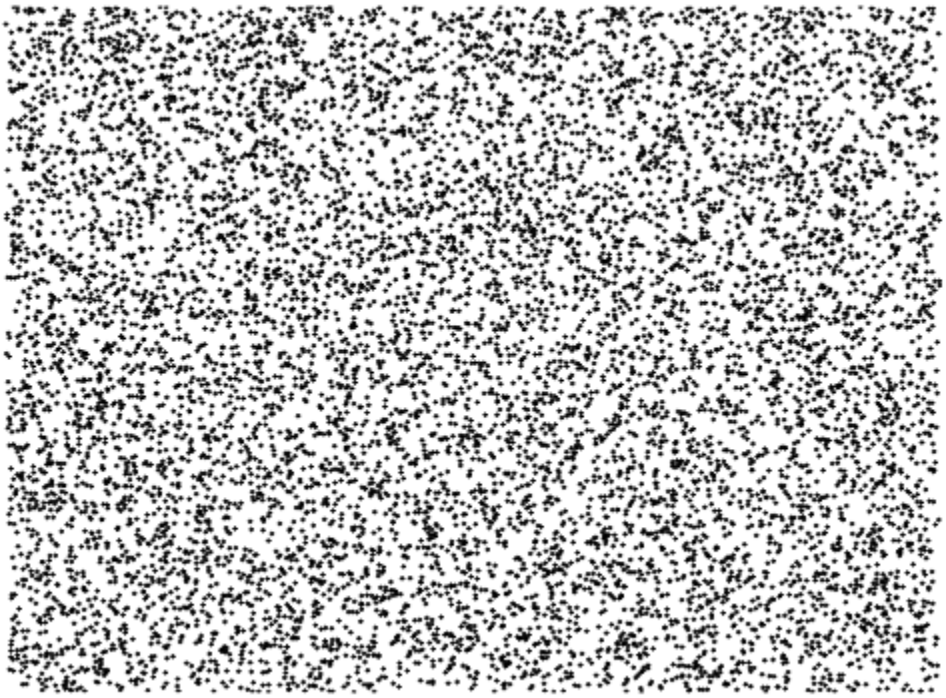

Not Sound

air

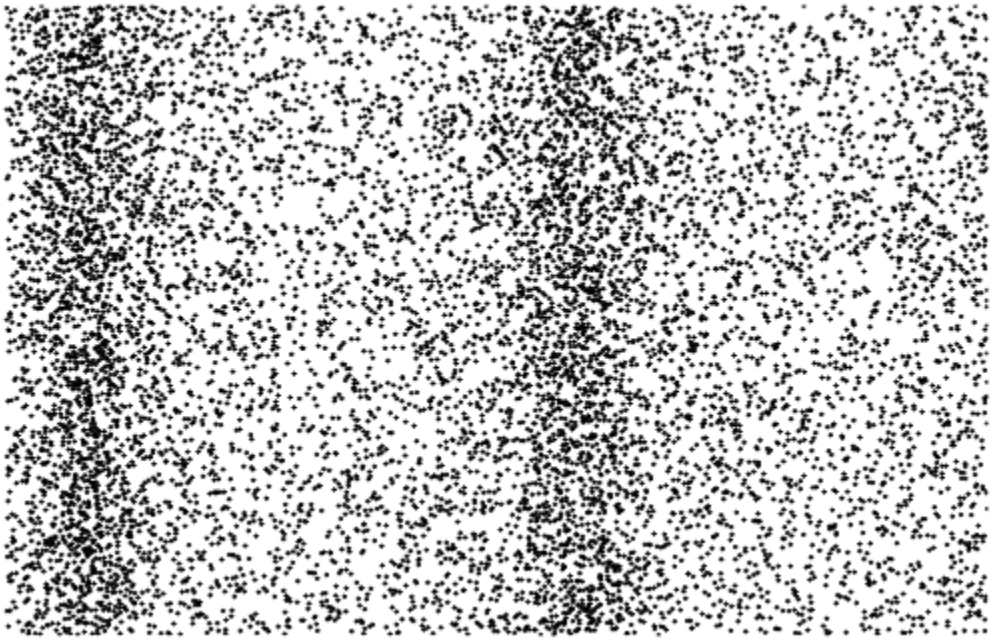

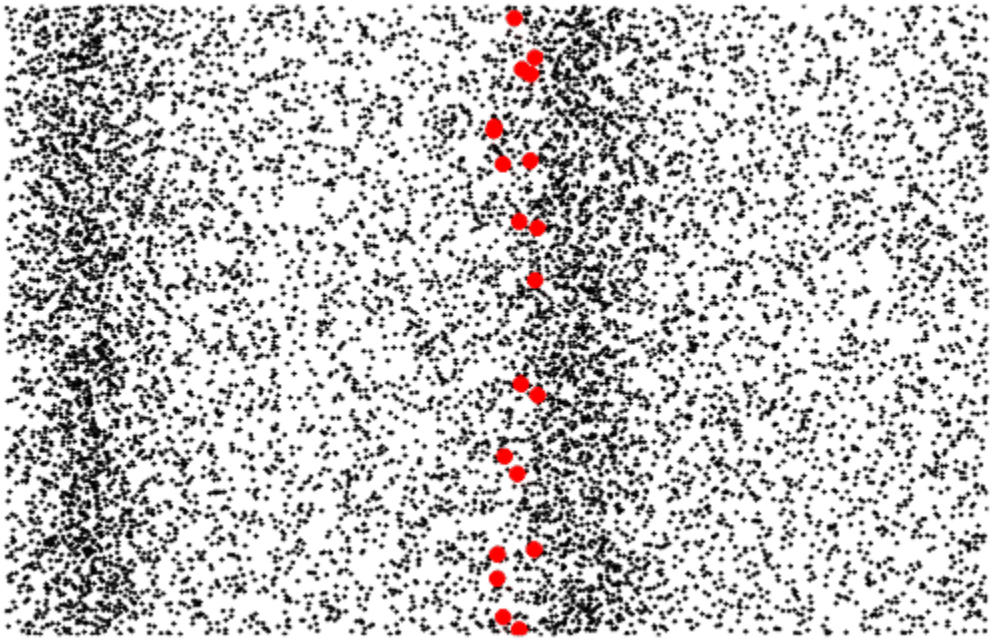

Sound - Aperiodic

Sound - Periodic

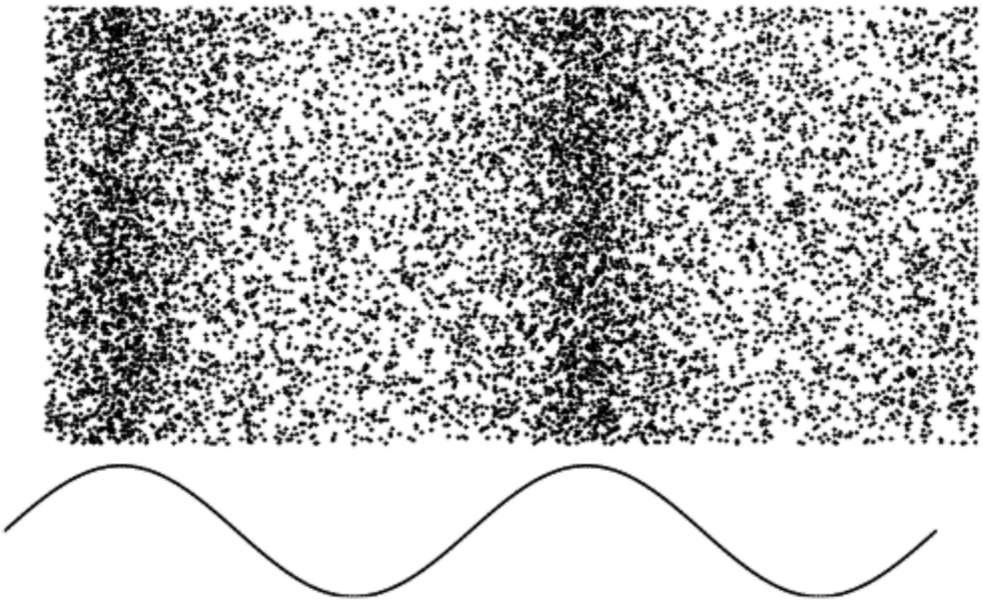

Sound

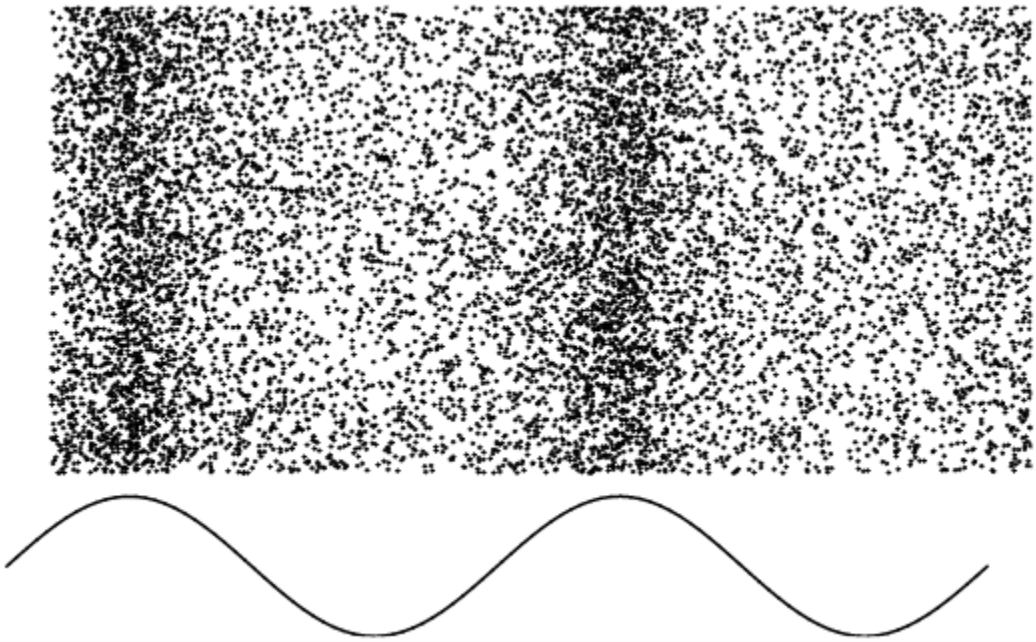

Sound is not the air molecules from my lungs hitting your ears.

Sound

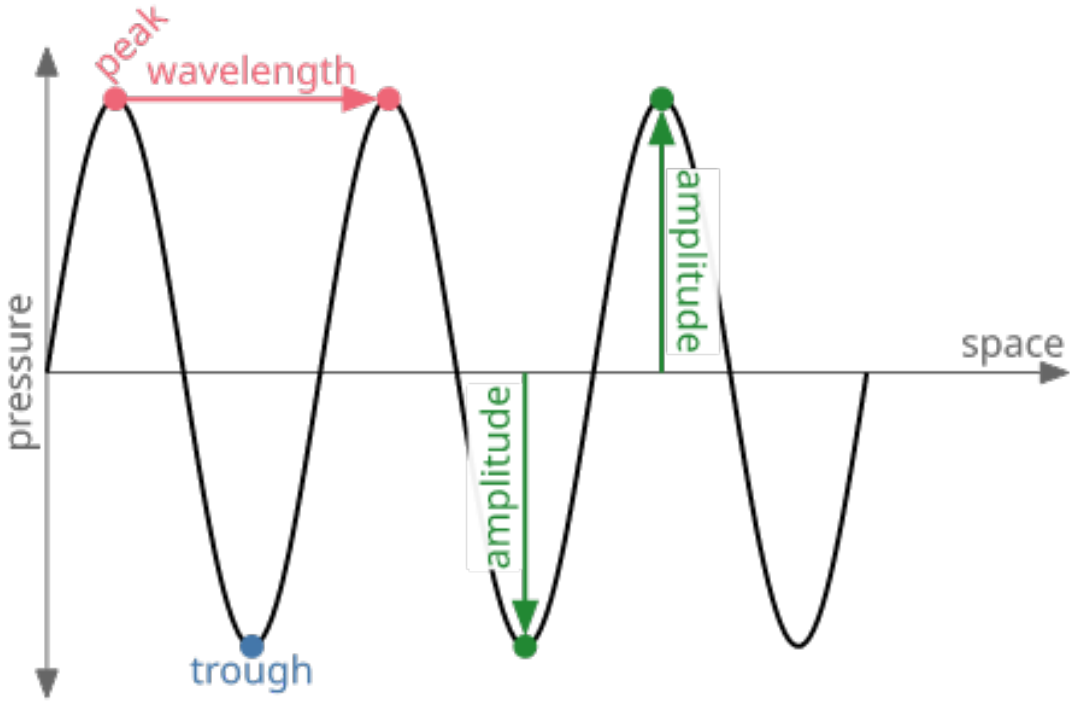

Where air is tightly packed, there's high pressure. Where it's more spread out, low pressure.

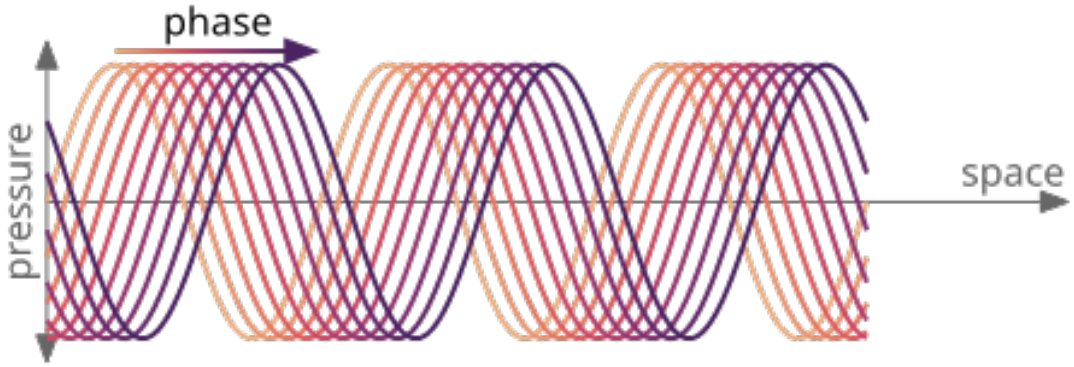

Sound

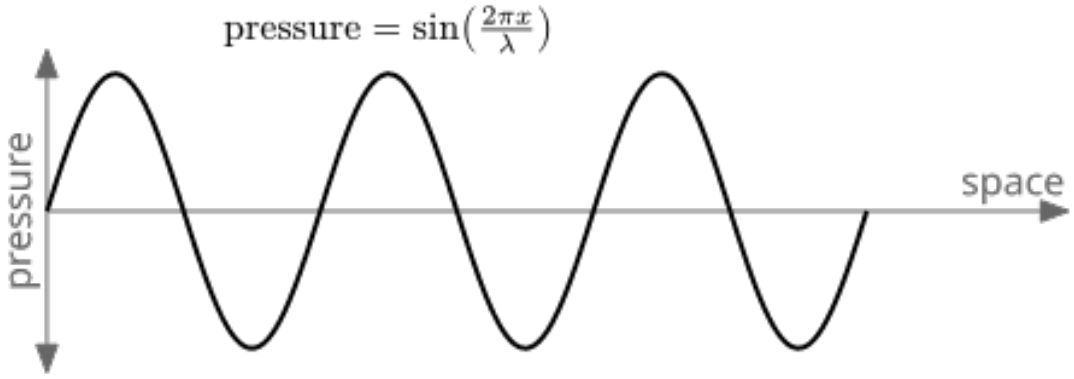

Sound

peak
wavelength
amplitude
amplitude

space

Sound - Sine Wave

Sounds - Frequency

Frequency = how many high pressure zones per second

This is going to be a function of both the wavelength and the speed of the wave.

Because the speed of sound will usually be fixed, Wavelength $\propto$ Frequency.

Frequency to Wavelength

$$\text{speed of sound} \approx 34300 \frac{cm}{s}$$

$$f \text{ Hz} = \frac{f \text{ cycle}}{s}$$

Frequency to Wavelength

$$\begin{aligned} \text{wavelength} &= \frac{34300\ cm}{s} \frac{1}{f \text{ Hz}} \\ &= \frac{34300\ cm}{s} \frac{s}{f \text{ cycle}} \\ &= \frac{34300\ cm}{f \text{ cycle}} \end{aligned}$$

Frequency to Wavelength

$$34300 \frac{cm}{s}$$

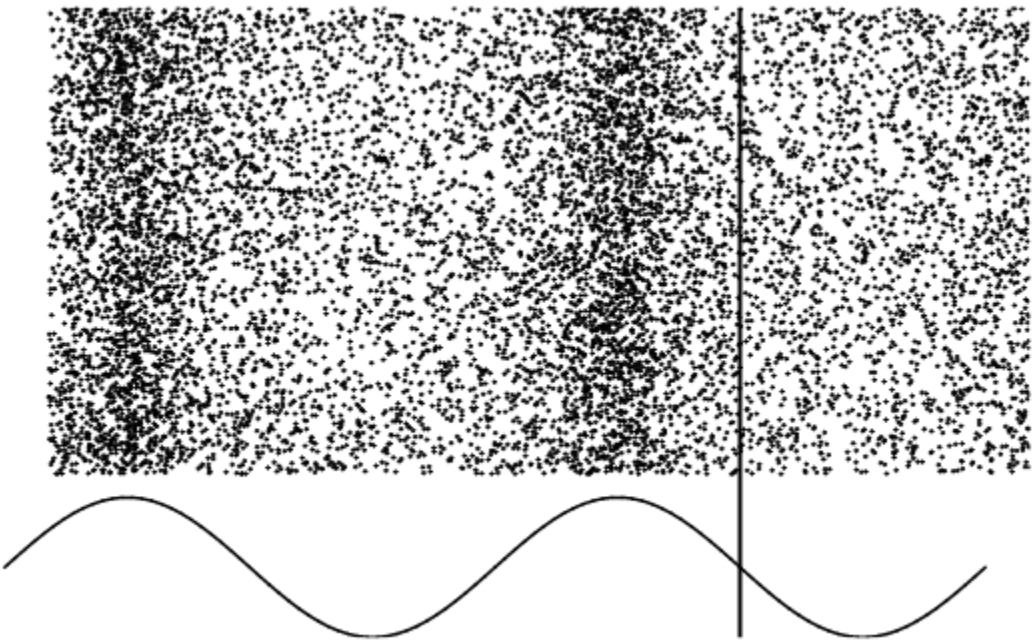

$$440 Hz = \frac{440}{s}$$

$$\frac{34300\ cm}{s}\frac{s}{440} \approx 78\ cm \approx 2.6\ ft$$

Wavelength to Frequency

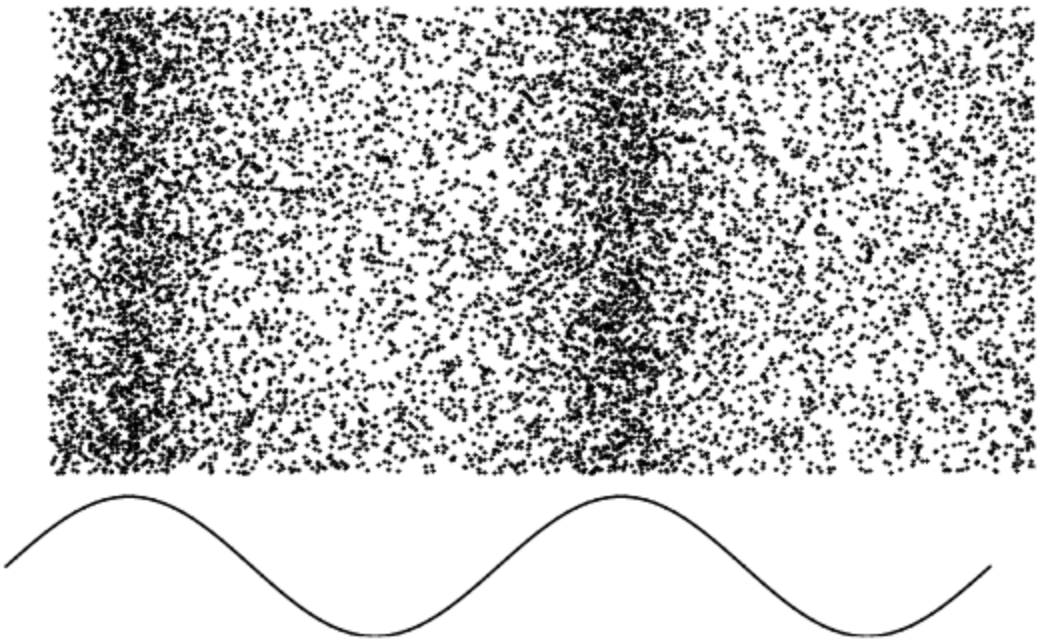

Sounds - Frequency

```
Joining with `by = join_by(t)`
```

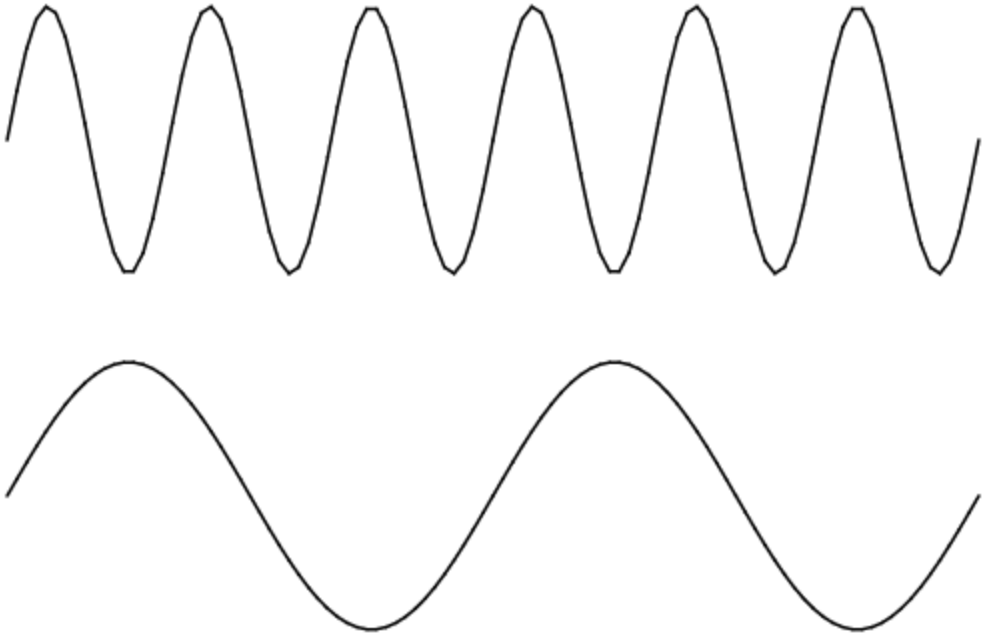

Sound - Increasing Frequency

As wavelength decreases, frequency increases

Sound - Frequency

The *speed* of these higher frequency waves is the *same* as the lower frequency waves

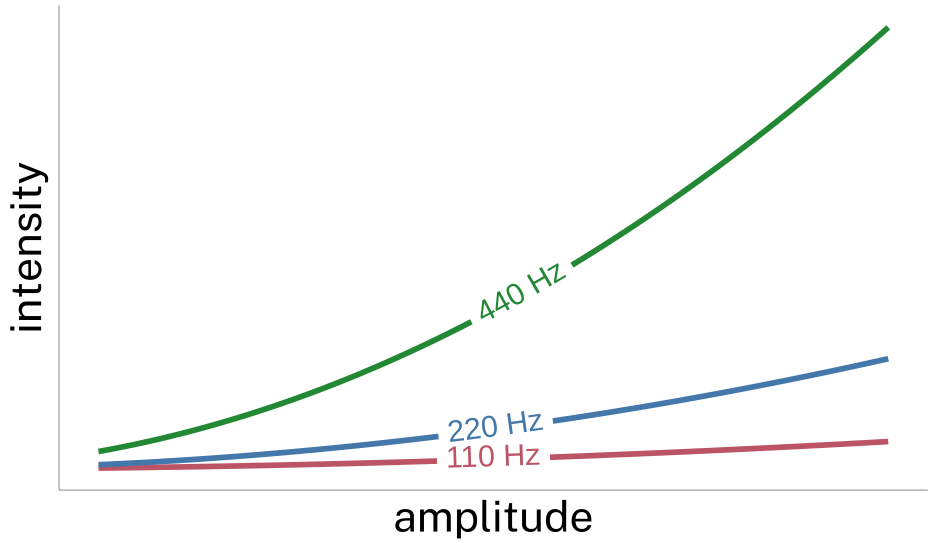

Sound - Frequency

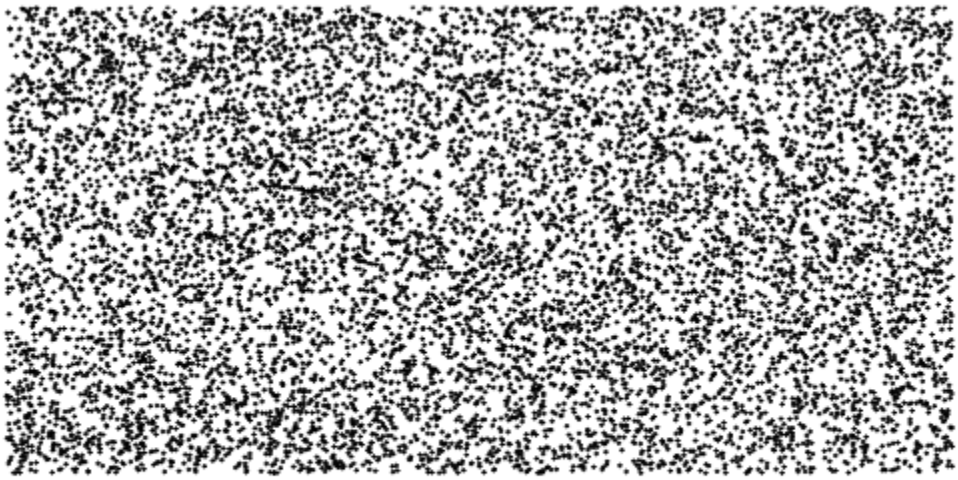

Every time frequency doubles, we experience it as the frequency increasing 1 octave.

Sound - Intensity

A relationship between frequency *and* amplitude

Sound - Increasing Amplitude

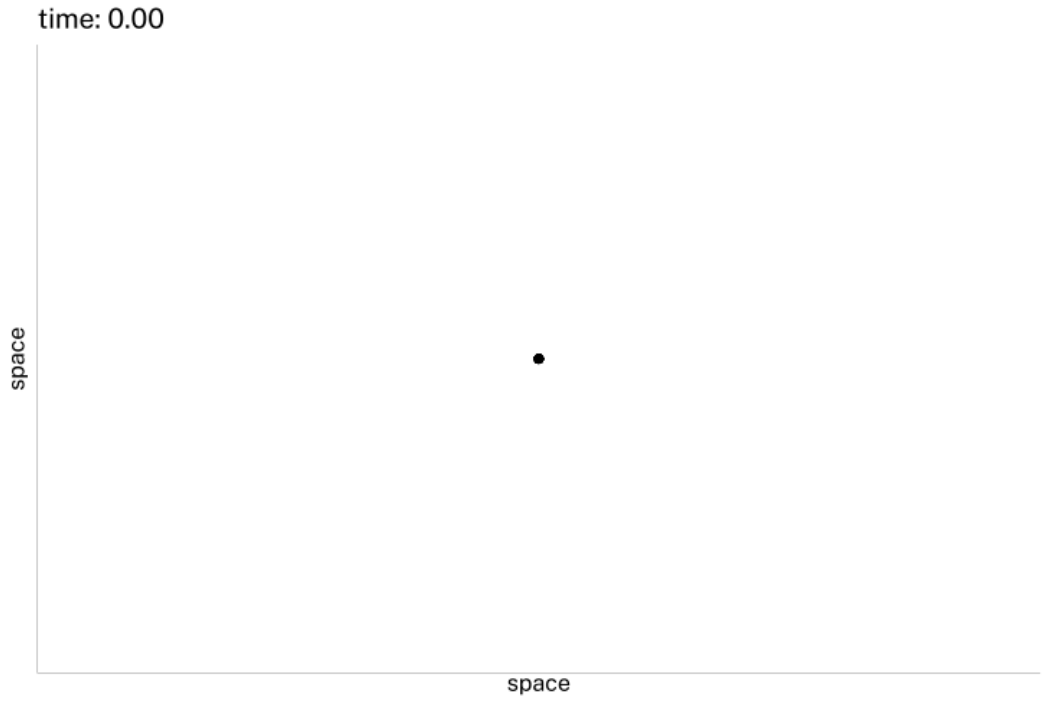

Sound - Loudness

Decibels (dB) are a measure of *relative* intensity.

$$1dB = 10\log_{10}\left(\frac{s_1}{s_2}\right)$$

Sound - The Doppler Effect

Sound - The Doppler Effect

The Doppler Effect

```
Warning: Removed 15 rows containing missing values or values outside the scale
range
(`geom_line()`).
